(54) Title: A SYSTEM FOR AND METHOD OF DISPLAYING INFORMATION

(57) Abstract: A system (100) for displaying information on a display device (104) comprises; receiving means (202) for receiving services; user interface means (220) for making a user selection of a type of information to be displayed on the display device (104); a filter (206) for selecting a data-element of a first one of the services on basis of the user selection; and rendering means (208) for calculating an output image to be displayed on the display device (104), on basis of output of the filter (206). The system (100) is designed to apply the filter (206) for selecting a second data-element of the second one of the services, on basis of the user selection, when being switched from the first one of the services to a second one of the services, with the data-element and the second data-element being mutually semantically related.
